

Survival Problems Require

Dream Big • Work Hard • Give Back

Each year, millions of people die within minutes, days, or weeks from preventable causes, including natural and man-made disasters. Everyone should understand life's risks and secure essential resources to live better, longer, and healthier lives.

Life essentials include clean air, refuge—shelter and protection—water, and food.

Natural disasters include extreme heat, flooding, earthquakes, hurricanes, and similar events. Man-made disasters include wars, environmental damage, shortages of preventable life-essential resources, and diseases or health conditions with known cures.

YOUR SURVIVAL is our number one priority
