

New Alternative Solutions to Age-Old- Survival Problems

Water is just one of the Rule of 3's life essentials, everyone must have to live. Revolutionary "Waters Straws" developed recently can provide some answers to water availability. But 97 percent of natural water sources are too salty for humans to drink without desalination first; and **Water Straws are not designed and can't desalinate water into fresh drinking water.** But we have an answer for this too! But first, a brief overview about water you should know.

Note: Humans bodies were not created to drink **ocean saltwater or urine**, otherwise these types of liquids will cause salt poisoning in a person's body that will lead to death.

People need to find or create ample volumes of freshwater to live, to flush salt and toxins out of their bodies, usually people can't live more than 3 days without drinking ample freshwater.

When you measure the salinity of water with a salinity meter or similar tool, *the ideal salinity levels depend on what the water is being used for.* **Freshwater that's used for drinking and irrigation purposes should have salinity levels of 0.5ppt or lower.**

On the other hand, salinity levels in the open sea can be higher than 30ppt since oceans consist of saltwater. Testing the salinity of water is important for numerous reasons. For instance, salinity measurements are key to know for estuaries where freshwater can mix with saltwater. Different organisms require different salinity levels to survive, essential to know!

When you want to identify the quality of water, among the most important measurements that you can take is to test the salinity of the water. **Salinity refers to how much dissolved salts are in the water.** This measurement is typically expressed in percentage or parts per thousand. To obtain this measurement, you must [measure the conductivity of the water](#), which can be done with a [toroidal conductivity sensor](#) or a contact conductivity sensor. No matter the type of sensor you choose, it's important to remember that the ideal salinity measurement depends on the body of water that you're testing and what you are using it for.

You'll also need holistic and proven solutions/answers for shelter and food, everyone's bodies require and ways to communicate and transport all your Life Essentials, if need be. These are not easy tasks to achieve separately, much alone collectively but are achievable when thinking differently, passionately, and working constantly till success.

For instance, a major problem is whether your transportation (i.e. Car, Truck, Motorcycle, EV Bike, RV, Bus, Taxi, Boat, Airplane, etc.) is available? Possibly NOT available when you needed them due to (Natural or Man-Made Disasters, Electric Magnetic Pulse, Human Conflicts/Wars. etc.) and especially when your home and transportation are both destroyed together and you and your family and pets must leave now, but how? Many people just leave with clothes on their backs; like my mom did when in 1982 a fire destroyed her home in California instantly, leaving nothing to rescue, not even her car and she and her husband became homeless, having to find immediate shelter, like so many others affected that day.

Homes and Mobility Issues Due to Disasters. Click Link Below to Play Video.

Fortunately, after 20 years of Research and Development, Surviveit2 has new solutions/answers for you to **GO FROM HELPLESS TO HELPFUL** while sheltering in place or being on the move for extended periods of time, as previously stated.

Our revolutionary new solutions and products include for shelter, water, food, mobility, communications, etc. and are a combination of the Best of the Best Survival practices known today; these were developed from all types of concerned organizations/people wanting to change the status quo of survival for a much better and safer future of disaster and adventure results and outcomes for everyone, anytime, and anyplace by being prepared!

Please review all the information we offer today, and we hope you will look forward to all the additional information we keep adding to our website. This is a never-ending journey for us, the Surviveit2 Team, and we love to hear and share your survival stories and suggestions.
